

## **Boyd's Mill Dam & Electric**

Edwin Eugene Ott, 20150211

The Boyd's Mill dam and electric generating facility was constructed in 1907 by the Reedy River Power Company. It supplied electricity to the town of Laurens located about 11 miles to the east. It gets its name from an early nineteenth century grist, flour, and saw mill located at the site (shown on the 1825 Mills' Atlas for Laurens County).
